Annotated Photograph

Step 1 – Find your photograph

Two options:

- Find an image from a search engine such as Google Images.
- Go to Google Maps, change the view to ‘Earth’ (bottom left), type in the location you need to find and then use the 3D option to get an oblique view (hold ‘ctrl’ and scroll mouse). Make sure you turn off labels (click the settings icon, then click ‘labels off’).

Step 2 – Paste or print your photograph on a new page

Copy or take a screenshot of your photograph, then paste onto a new document or print it out.

Step 3 – Label significant features on your photograph.

Significant feature should relate to the lake and how it is used by people. Examples include:

- Water features – names of lakes, stormwater drains, rivers
- Recreational facilities
- Infrastructure – roads, bridges, dams
- Surrounding suburbs, businesses/buildings and shopping precincts.

Step 4 – Choose some of these features to describe how they are significant.

See ‘example of annotated photo’ on Canvas to see how features can be labelled and described.
Annotated Photograph –

1. Paste the image of Stranger Pond that you will be given in the centre of this page.
2. Use your own knowledge and additional research to label and describe significant features on this image.
